Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

2. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Cookson et al.

Cookson et al discloses a video recording/reproducing apparatus that shows all the limitations recited in claims 1, and 2, including the feature of generating processed partial record information blocks each composed of a plurality of predetermined units (See Cookson et al's column 36, lines 33-42), the feature of generating and outputting recording position information which is to be recorded by each of predetermined reproductions units composing the information units, the recording position information indicating recording positions on the information record medium of said reproduction units corresponding to reproduction times of the partial record information blocks within a predetermined range before and after the respective one of the reproduction units on an axis of reproduction time of each of the partial record information blocks (See Cookson et al's column 36, lines 43-45), the feature of recording the processed partial record information blocks multiplexed with the recording position information as specified in the present claims 1, and 2. (See Cookson et al's column 2, lines 58-64).

Art Unit:2712

With regard to claims 2, and 5, the feature of the partial record information blocks including at least video information which are to be reproduced at same one reproduction time on the axis of reproduction time, and each of which comprises respective one of said video information regarding same one object taken from different viewpoints from each other as specified therefore is present in the cited reference of Cookson since Cookson et al discloses a plurality of versions of the same one movie or of the same one scene. (See Cookson et al's claim 1).

With regard to claims 3, and 6, the feature of the producing apparatuses having different setting modes as specified thereof would be present in Cookson et al since Cookson et al discloses that the user can set the reproduction mode to one of the plurality of versions recorded on the recording medium. (See Cookson et al's claim 2).

With regard to claim 7, the feature of the reproducing apparatus including the capability of detecting and demodulating the recording position information and the processed partial record information blocks from the record medium and extracting the recording position information and outputting a control signal on the basis of the extracted recording position information as specified thereof is present in the cited reference of Cookson et al. (See Cookson et al's Figure 2, component 47, and the corresponding disclosure).

Claims 8-9 recite substantially the same limitations recited in claims 2-3 and are therefore rejected under the same rationale.
